

WYSE MANAGEMENT SUITE

Industry's premier Wyse endpoints management solution

Wyse Management Suite is a flexible cloud management solution, that lets organizations centrally configure, monitor, manage and optimize their Wyse thin clients and *Wyse Converter for PCs, anytime, anywhere. HTTPS-based imaging, updates and downloads, make it the most secure way to manage Wyse endpoints. Meanwhile, powerful dynamic device-grouping abilities, remote shadow capabilities and the ability to enforce default configurations give network administrators maximum performance and flexibility in provisioning and managing devices on the network.

Real time management

With the fastest installation process in the industry**, Wyse Management Suite lets you take control in five minutes or less. Browser/mobile app allows users to view critical alerts, notifications on the dashboard and send real time commands with one tap. In addition, the management console can now be localized in 7 different languages making it convenient for our international customers to deploy it in their regional languages.

Choose the right solution for you

Organizations can choose between two main options:

- Wyse Management Suite Standard: a free, on-premises management tool for up to 10,000 endpoints.
- Wyse Management Suite Pro: per seat, per year subscription with the option of either on-premises and cloud management – or a combination of both.
