

# THE NEED FOR SIMPLICITY

Why A Hyper-converged Infrastructure Appliance Reduces Today's IT Complexity.

Today's IT infrastructure is overloaded and complex. Increasing data workloads, cost-containment challenges and the demand from business for greater agility and flexibility are driving CIOs to seek simplified solutions. Here's why a hyper-converged infrastructure appliance should be one of them.

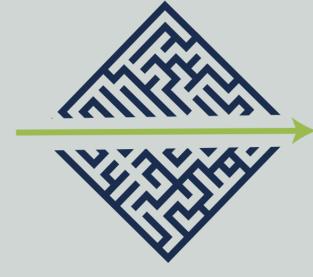

## IT IS DOING MUCH WITH LITTLE

## CURRENT IT INFRASTRUCTURE IS COMPLEX DUE TO:

## HOW TO BYPASS THE COMPLEXITY

A hyper-converged infrastructure is a simplified architecture, one that enables organizations to scale out by adding software, rather than scale up by constantly adding hardware.

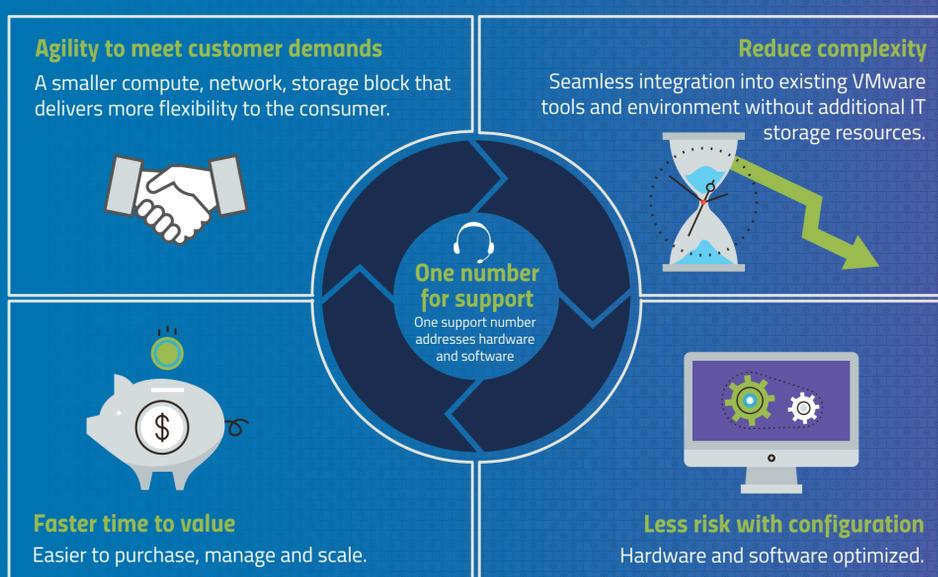

The rise of hyper-converged infrastructure appliances (HCIA) is being driven by cloud and software-driven data centers. They enable faster purchase, deployment and management to support business demands — all at a lower cost.

### HYPER-CONVERGED INFRASTRUCTURE APPLIANCE (HCIA)

CONVERGED INFRASTRUCTURE	HCIA	VIRTUAL SAN READY NODES
<ul style="list-style-type: none"> <li>Multiple discreet components</li> <li>Management overlay</li> <li>Large financial commitments</li> </ul>	<ul style="list-style-type: none"> <li>Next generation building blocks for data centers</li> <li>Includes server, storage, networking PLUS software overlay</li> <li>Software-defined storage</li> </ul>	<ul style="list-style-type: none"> <li>Rapid time-to-value</li> <li>Effective scale-out infrastructure</li> <li>Simplified management and operations</li> </ul>

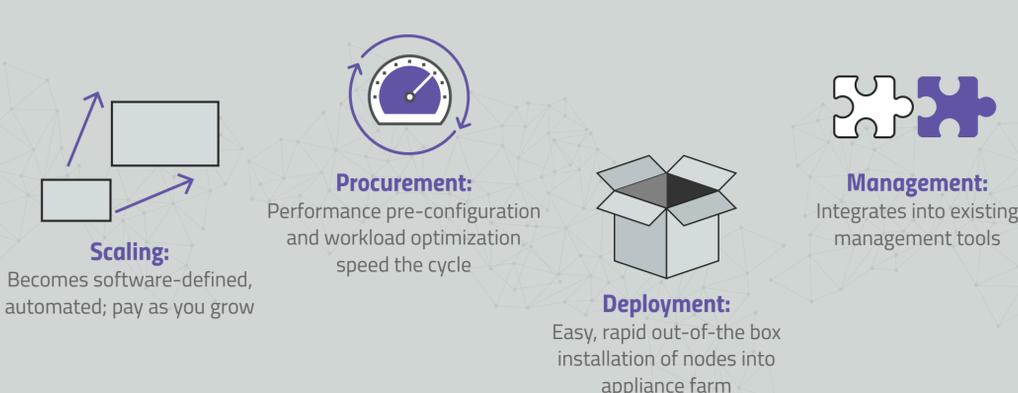

## THE BENEFITS OF A HYPER-CONVERGED INFRASTRUCTURE

Hyper-converged infrastructure is the evolution of a converged infrastructure that delivers the following values:

## HCIA: THE NEXT-GEN BUILDING BLOCK OF CLIENT VIRTUALIZATION

Key benefits of using an HCIA:

## WHY HYPER-CONVERGED AND CLIENT VIRTUALIZATION

Key benefits of using an HCIA for desktop and app virtualization:

Intel Inside®. Powerful Solution Outside.
