

Protecting government assets with Wyse thin clients

Government IT systems come with their own unique set of challenges, but at the forefront are security and strict compliancy requirements. Tight security is essential for applications, files and devices that need to be protected for the long-run.

Wyse thin clients provide government, local, regional and federal agencies a secure platform, which enables IT to meet strict government mandates to access highly sensitive information. Employees can access their virtual desktops securely, while data is protected from the datacenter to the edge.

See how the new generation of Wyse thin clients can power your organization – through reduced costs, improved security, simpler administration and better performance.

Wyse thin clients offer:

NIST standards and other strict regulations and compliancy certifications on hardware

Most secure operating system software available in Wyse ThinOS

Extensive hardened and secure thin and mobile thin client portfolio

Dedicated sales and engineering staff with excellent relationship building skills

Successful proof of concept execution and deployments

100% controlled with Unified Endpoint Management from the cloud or datacenter

Why Wyse thin clients for government?

Security

Better performance on thin clients means their cost, security and control benefits can extend to more parts of the organization
